

Alex Christopher

AI Engineer — Computer Vision & Data Automation

alex.christopher97@gmail.com · Surabaya, Indonesia · <https://linkedin.com/in/alex-christopher97> · <https://alex-chris-portfolio.vercel.app> · Open to relocate to Malaysia (EP-eligible)

SUMMARY

AI engineer with production experience building computer vision and LLM-agent systems for FMCG and manufacturing operations. Ships end to end — from model to a tool non-technical teams actually use — across retail field audits, warehouse monitoring, and natural-language interfaces over live business data. Open to relocating to Malaysia.

EXPERIENCE

AI Engineer — PT. Wings Surya Sep 2025 – Present
Surabaya, Indonesia

Building computer vision and LLM-agent systems for retail, supply-chain, and warehouse operations — see Selected Projects below for specific systems shipped in this role.

AI Engineer — PT. Visiniaga Mitra Kreasindo Jan 2025 – Aug 2025
AI R&D — delivered AI project work for external clients.

SELECTED PROJECTS

Agentic AI for ERP — Telegram Bot, Text-to-SQL **FEATURED**

Built an LLM agent that turns plain-language questions into safe, read-only SQL against a live ERP database, reasons over the result, and replies with numbers and a generated chart — extended to query across AR, AP, Sales, Purchasing, Logistics, and Inventory modules in one chat.

Stack: LLM Agent, Text-to-SQL, Python, SQL, Chart Rendering, Telegram Bot API

Computer Vision KPI Scoring — YOLO Planogram Compliance **FEATURED**

Trained a YOLOv11 model that scores freezer planogram compliance — fullness, tidiness, SKU completeness — from a single photo, cutting a 5-7 minute manual store walk-through down to a ~15-second automated check.

Stack: YOLOv11, Computer Vision, Python, OpenCV, KPI Scoring

Real-Time Pallet Fullness Detection — Warehouse CCTV

Deployed a YOLO model on an existing CCTV feed to classify pallets as full or not-full in real time and alarm before an incomplete pallet crosses into warehouse stock — catching shipment-count discrepancies before they reach a customer.

Stack: YOLO, Computer Vision, Real-time Detection, RTSP/CCTV, Python

Packaging Design Diff Tool — Computer Vision QA

Built an OpenCV pipeline that aligns and pixel-compares two packaging design revisions and flags exactly what changed, catching edits a manual side-by-side review misses across thousands of SKU revisions a year.

Stack: Computer Vision, OpenCV, Image Diffing, Python

New Product Demand Forecasting Automation — BigQuery/SAP → Sheets + AI Bot

Automated a BigQuery (SAP)-to-Google Sheets pipeline that fills in new-product demand forecasts using the Supply Chain team's own formula, paired with an AI bot for natural-language analysis across 40+ concurrent product launches — replacing manual Excel updates.

Stack: Python, BigQuery, Google Sheets API, LLM Agent, SAP

SKILLS

AI / LLM	LLM Agents, Text-to-SQL, Prompt Engineering, RAG, OpenClaw, Hermes Agent
Computer Vision	YOLOv11, OpenCV, Object Detection, Image Diffing, CVAT
Data Engineering	BigQuery, SQL, ETL Automation, Google Sheets/Excel API
Fullstack	Python, TypeScript, React, REST APIs, C#
Tools & Infra	Docker, Git, Vercel, Linux, Claude Code, ChatGPT Codex

EDUCATION

B.Eng, Informatics Engineering — Universitas Kristen Petra 2015 – 2019
